

# Welcome Back!

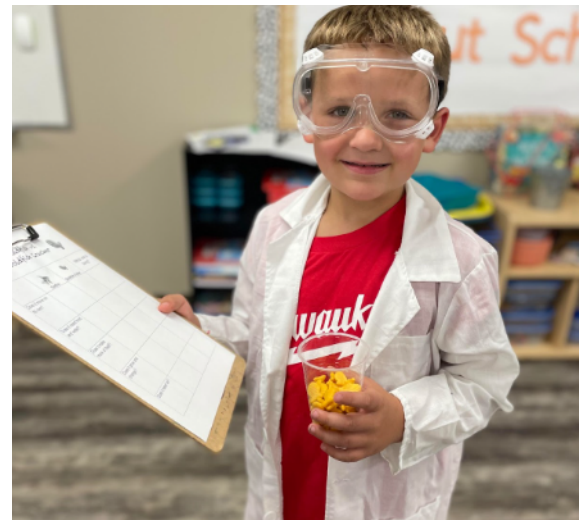

We are so happy to welcome back all of our LHHA family for a brand new school year! Each month we will circulate a recap of our favorite things we did with our classes and look forward to sharing them with all of you!

## Grades K-1

### LITTLE SCIENTISTS

by Mrs. Kesler

This past week these Kindergarten and 1st grade students have discovered that scientists do more than just make potions and do experiments! We have discussed different types of scientists and how they collect evidence to answer questions! We are now diving into learning about living and nonliving things. To put this concept into practice, we compared a real goldfish to Goldfish Crackers! We answered questions that helped lead us to the conclusion that Goldfish Crackers are nonliving and a goldfish is living!

### MAKING FRIENDS

by Ms. De-Berry

Meeting and making new friends is how we started off the new school year! We wrapped our friends in toilet paper, learned new routines and rules, and began learning new sight words in the last couple weeks. Looking forward to a great year!

### GETTING FAMILIAR

by Mrs. Reifsteck

First grade has had the best time this month! They loved exploring all of our centers, learning our new routines and learning the importance of shining God's love on everyone they meet.

Here are some cute first graders enjoying our science center. They are mixing colors and playing so well with each other!

# Grades 2-5

## WORKING TOGETHER

by Ms. Weaver

Students have been spending their first couple of weeks in 2nd Grade getting to know each other and our routines. It has been so fun to watch them try new things and work as a team to accomplish a goal. On day 1 they got to practice communicating with a cup stack challenge! They learned a lot about strategy and teamwork.

## A CLASS PRAYER

by Mrs. Herrig

The first few weeks of school, the 3rd and 4th graders have been learning all about prayer! We have learned what it means to pray, why we pray, and what all should be included in a prayer. After learning all about prayer, we decided that we needed to come up with our own class prayer! We are planning to pray our prayer together every morning, and are hoping we will even memorize it before too long. After a couple days of discussion, and brainstorming, we came up with the perfect prayer!

Dear God,

Thank you for this beautiful school where we feel safe and free.

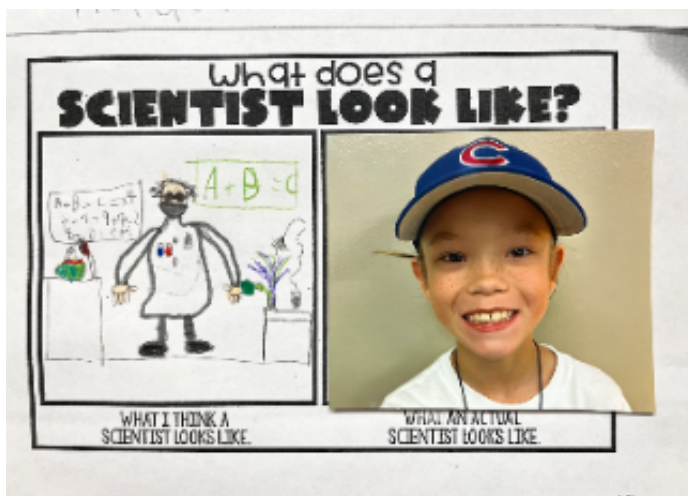

Thank you for our amazing family, our thoughtful friends, and for our teachers that help us to be the best that we can be.

Please forgive us for any mistakes we will make today, and please help us to learn and grow in every way.

Please help our bodies to stay healthy and strong. And please help us to know right from wrong.

Please remind us to listen with open ears and an open mind, And please help our hearts to always be giving and kind.

In Jesus' name we pray,  
Amen.

## OBSERVATIONAL SCIENCE

by Mrs. McGraw

The first week of school, the 3rd, 4th, and 5th graders discussed what they think a scientist looks like and what they study. This week we learned all about the scientific method; 1. Observe and ask questions 2. Form a hypothesis 3. Experiment and gather data 4. Study data and reach conclusions. Then, we learned how to design a fair experiment. The students did a great job determining if an experiment was fair or not.
